| First name | Last name | Company | What is the name of | Give us a short description of your project | How advanced is you | What is your roadmap for the SHH and beyond? | Would you accept external contributors? |
|---|---|---|---|---|---|---|---|
| Pedro | Fontana | LambdaClass | Cairo-VM | Cairo Virtual Machine | In Production | | Yes |
| Melike | Keçelioğlu | BIST - Cryptom | ghostPay | I plan to integrate account abstraction to my project name 'ghostPay' with starkware. Build and app widget, plugin that has SDK which This open source SDK have developed is encrypted with ZeroKnowledge and makes it different with its tooling features. Owner can manage the subscriptions order date/time and upgrade it thanks to Smart/Proxy Upgradable contracts. We are other developers comfortability on using the plugin which means developer-friendliness, tooling encryption with ZeroKnowled | medium | I plan to integrate and add features on project to expand it. | for sure |
| Sneha | kumari | cochin university of s | AutoStark | AutoStark is built on StarkNet Network, responsible for providing infrastructure to automate smart contract executions. It includes funct | Ideation phase | We will be building during SHH and maybe think of more future prospects and features to add to make it a full fledged scalable project with the help of the ecos | No |
| Damian Alejandro | Piñones | - | Starknet Forms | This is a Google Forms like project built using Starknet. You can create a multiple choice form / test and share it with other users who can complete it. Then, scores for each user are calculat | It is currently function | Migrate the contracts to Cairo 1 and add the functionality to save simple forms like those in Google. Currently, the field types are only free text. We would like to | Yes |
| Johnny | Nguyen | RYG.LABS | Flex Marketplace an | We are the flagship NFT Marketplace. Flex is building NFT infrastructure to grow NFT tech on Starknet Ecosystem | Flex is live at flexing | gg and have around 300 tx a day. With around 15k unique users in the last 10 days | Maybe in the near future |
| Emir | Soytürk | Dojo Arena | Dojo Arena | DojoArena.io is a Game Center for special games that you can play with any of your NFTs (and their communities). Token-gated communities are strong communities that leverage the influence of many web3 projects and their communities. Therefor Imagine playing a game with your Ducks Everywhere NFT community by briq. It could be an interesting event that strengthens relation In Dojo Arena, you can join or create games that are listed and made with Dojo. You can manage different turn based games in one p | developed in pragma | We are aiming to release it in testnet | no |
| Falco | Rodenburg | Eras | Rumble Era | Rumble era is an on-chain autonomous worlds game where the player manages a group of adventurers controlled by AI | We have been working | In the SHH we want to focus on the on-chain part of our game and deployment on Starknet or Kakarot | We would gladly accept external contributions to our project. |
| Sam | Polgar | Molki | ZoKla | Anonymous Credentials - private 1 time login | Not very advanced | Build minimum working product with Cairo & frens I meet there, contribute to Starknet ecosystem, meet hackers to continue building with | Yes! |
| Patricia | Brolezzi | Token Engineering A | Education Project for | P2P study groups reputation system built with starknet id | Early stages | After SHH I'll go to Thailand for the Hacker House there, and finish the project. Then, keep building | Sure |
| Lilly | Guo | Freie Universitaet Be | Green DeFi (Bachelo | Develop a decentralized lending and borrowing protocol that supports carbon tokens as collateral. Its tokenomics are based on vote-lo | Early-to-middle stage | I'm not sure if I will continue with my thesis project (it's built on Ethereum). I can imagine working on a different DeFi project with related concepts and research ideas. | |
| Ammar | Arif | Cartridge Gaming Co | Dojo | Dojo is a verifiable game engine and toolchain for building onchain games and autonomous worlds with Cairo 1.0. | somewhat advanced | Improve more on Dojo and meet new people | yes |
| Bourhene | Adjmal | Self | customDAO | The creation of DAOs with multiple levels and account abstraction intertwined | for now, it's just an id | Start the project, verify the feasibility and create a platform for everyone to create complex DAOs. | Yes |
| Rich | Warner | (self-employed) | Rumble Era | We're making an on-chain game that uses AI/NPCs in a way that the player doesn't directly control any characters, but can only influer | We've made progress | We would like to get an alpha version ready for launch, and then deploy the game possibly on Kakarot. | I think we're always open to help |
| Takayuki | Ono | N/A | VeryLongParty | A platform (map) like Mario Party that is played with dice, and each mini-game that can be played simultaneously by teams transformin | The product leading | (1) Make it easy to connect each object in a game (e.g., moving from one clay pipe to another in a different game) and each map square (e.g., a square in a me (2) Create something like an island for each NFT, visualize what games are connected to that NFT, and make it possible to enter each mini-game from that isl | yes |
| Camille | Saury | Self | CustomDAO | The creation of DAOs with multiple levels and account abstraction intertwined | Just an idea | Start the project, verify the feasibility and create a platform for everyone to create complex DAOs. | Yes of course |
| Balthazar | | Carbonaoble | Carbonable | On-chain protocol to fund, manage and be rewarded for doing good for the planet | V1 done in Cairo 0, w | Finalize the Cairo 1 migration | Yes |
| Osheen | Mahajan | Nordek | Saganize | Burner wallet.sdk | Beginning stage | Build the mvp and demo sdk | Yes |
| Bora | Mindas | Self employed | Deosys | Starknet Full Node using substrate | Well advanced | Have a fully working node and enable p2p | Yes |
| Hamza | Karabağ | Starknet Turkey | Fibrous & Moso | DEX Aggregator on Starknet & NFT Marketplace | They are as advanced | I'll work on Moso to make it ready for Mainnet | Sure, any Rustacean is welcome |
| VENNILA | SESHADRI | Secur Tech | Autostark | Project name is Autostark. Short Desc: AutoStark is built on StarkNet Network, responsible for providing infrastructure to automate smart contract executions. It i | Building stage (smart | Use cases: 1. Yield farming: AutoStark can be used to automate the process of yield farming, which is the act of staking tokens in liquidity pools to earn rewards. This can 2. Oracles: AutoStark can be used to power decentralized oracles, which are systems that provide external data to smart contracts. This can be used for a vari 3. Algo-stables: AutoStark can be used to create and manage algo-stables, which are cryptocurrencies that are designed to maintain a stable price. This can b 4. Bridges:AutoStark can be used to power cross-chain bridges, which allow users to transfer assets between different blockchains. This can be done by using 5. DeFi: AutoStark can be used to power a variety of DeFi applications, such as decentralized exchanges, lending protocols, and prediction markets. This can | Yes sure |
| Francisco | Strambini | LambdaClass | cairo vm | the vm of cairo | in prod | | - |
| Gaëtan | Anceline | Working as a contrac | Could work on accou | Account abstraction with plugin would consist of taking the OZ implementation and thinking about how it would be possible to make it a Idea stade only Compression would be about implementing a toeless compression algorithm (Huffman) | | | Yes of course |
| Alim | Sahin | Fibrous Finance | DeFi Widgets | Many projects want to integrate the Token swap feature into their own projects. I will develop a library of widgets to make this easier to | At the moment of ide | I am planning to develop the first version of the widget at HH time. Then it will be made more usable, and then it will continue to be developed according to the | I don't need an extra developer at the moment |
| Juan | Asher | 0xMonkeyMind | 0xMonkeyMind | Meditation Tamagotchi, incentives on starknet, currently on 0.x migrating to 1.0 | quite simple | cairo 1.0 migration / also interested in working on other projects | yep |
| Michael | Zaikin | Baking Bad | DipDup | DipDup is an ultimate Starknet API and a building block for custom app-specific indexers | DipDup is aimed to b | In the SHH I would want to join a team to help them with our stack if applicable (if e.g. they need any kind of on-chain data indexed), or contribute to their proje | Absolutely |
| Apoorv | Sadana | Charged | Madara Tsukuyomi | The Madara desktop app that allows you to connect to Sharingan and also interact with it in just one click! | Moderate | Make it work for all common OS, add apps, exlorer and other options to make the experience smooth and fun. | Yes |
| Javier | Chamiel | Starknet-Es | | I'm learning to enhance development in Cairo and StarkNet to continue learning about the ecosystem. One of the projects is "Source D | This dapp is starting | I would like to learn more about development in the field, in addition to working on translating the Cairo Book and other resources. I would like to enhance Cairo | Of course, it would be an honor to learn together and adapt to another team. If it could be in Spanish, it would be greatly appreciated due to the language. |
| Clement | Suzat | No Company | | Defi app where we can place swap order, Swap will be executed using Avnu. Proce will displayed using checkpoint gathering event fro I started to work on g We could also build arbitrage opportunity. Portofolio rearrangment... | | For SHH build a POC. If successful, continue to build the app to deliver something on mainnet (2024) | Yes i'm alone :) |
| Elias | Tazartes | KKRT Labs | Kakarot zkEVM | Kakarot is a zkEVM written in Cairo. It enables teams to build & deploy EVM apps, and benefit from a dual advantage: the same deve | Building Testnet right | Releasing a testnet | Yes |
| Lauri | Peltonen | Freelance | Starsign | StarkNet multisig | Not very advanced, l | To be discussed! No roadmap currently | Yes |
| Giwook | Han | Door Labs | StarkEvent | Web2 user can register event using Starknet tech | we are planning to do | make StarkEvent and make another program if time allows | I don't think so |
